

WATERING SCHEDULE

Class:

Plant:

Date	Name(s)	Checked	Watered

Checking:

Check the weather – Is it hot or sunny? Wet and raining?

Check the plant – Does it look droopy? Dry? Strong and tall?

Check the soil – Does it make your finger wet if you dip it in? Is it dry and crumbly?

Tick the box to say you have checked.

Watering:

Pour your water onto the soil, not the plant. Pour it near the plant stem so it will end up near the roots. Don't spray it everywhere, it will just evaporate away. Water enough to wet the soil thoroughly, but if there starts to be puddling on the surface you should stop. Tick the box when you have watered, so tomorrow's checkers know when it was last done.
