

## Pea Shoots

These tubs will grow pea shoots just like the expensive ones in salad bags. They are crowded together so they won't grow into proper pea plants. Just keep them watered (but not drowned!) and when they are about 10cm high and have wispy tendrils at the tips, you can start snipping some off to put in your salads and stir fries. They will grow back several times.

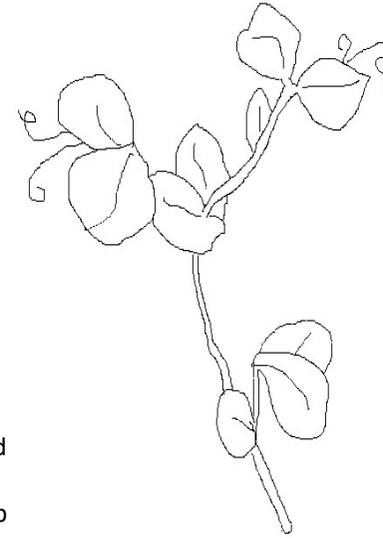

We have sent them home unwatered to reduce mud in the school bag! So please water them at home and keep them on a bright windowledge.
